Ontario Confined Space Entry Compliance Checklist

- Identify and assess all confined spaces before any entry.
- Create a written confined space program with procedures and controls.
- Complete a confined space entry permit with all required details.
- Test the atmosphere for oxygen levels, toxic gases, and combustible vapours.
- Control hazards through lockout, ventilation, and safe entry procedures.
- Prepare a rescue plan and assign a trained standby person.
- Equip workers with proper PPE suitable for the specific confined space.
- Document all actions, train workers, and review procedures regularly.
